
Digital I/O Daughter Board

User Manual

Warranty

All products manufactured by ICP DAS are warranted against defective materials for a period of one year from the date of delivery to the original purchaser.

Warning

ICP DAS assume no liability for damages consequent to the use of this product. ICP DAS reserves the right to change this manual at any time without notice. The information furnished by ICP DAS is believed to be accurate and reliable. However, no responsibility is assumed by ICP DAS for its use, nor for any infringements of patents or other rights of third parties resulting from its use.

1. DIO Daughter Board

We provide all kind magnetic relay, SSR, open-collector, photo-mos relay and isolated digital input, daughter boards for I/O control applications.

1.1. How to select daughter board

You must make sure which digital I/O board you choose and what kind applications you designed. Then select suitable daughter board.

■ Selection criteria for output type daughter board

1. Type of contact load
AC or DC? ; Resistive or inductive or capacitive or lamp? ; Occurrence of back electromotive force or inrush current?
2. Level of contact load.
Power load or small signal?
3. Coil rated voltage
12Vdc or 24Vdc?
4. Frequency in switching operation
5. Demand for life in switching operation
6. Connector type of digital I/O board
20-pin or 50-pin Flat cable or D-sub cable?
7. Mounting
Panel mounting or DIN-rail mounting

■ Selection criteria for input type daughter board

1. Type of input signal
AC or DC? Dry contact or wet contact?
2. Level of input signal
3. Connector type of digital I/O board
20-pin or 50-pin Flat connector or D-sub connector?
4. Mounting
Panel mounting or DIN-rail mounting

(*) DB-16P8R :

16-channel isolated digital input and 8-channel relay output daughter board

2. DB-16R

The DB-16R, 16 channel Relay Output Board, consists of 16 form c relays for efficient switch of load by programmed control. It is connector and functionally compatible with 785 series board but with industrial type terminal block. The DB-16R can be connected to DIO-64, A-626, A82x DAS board and PCI-series multi-function board or any other compatible DAS board. The relay are energized by apply 5 volt signal to the appropriate relay channel on the 20-pin flat cable connector. 16 enunciator LEDs, one for each relay, light when their associated relay is activated. To avoid overloading your PC's power supply, this board provides a screw terminal for external power supply.

2.1. Features

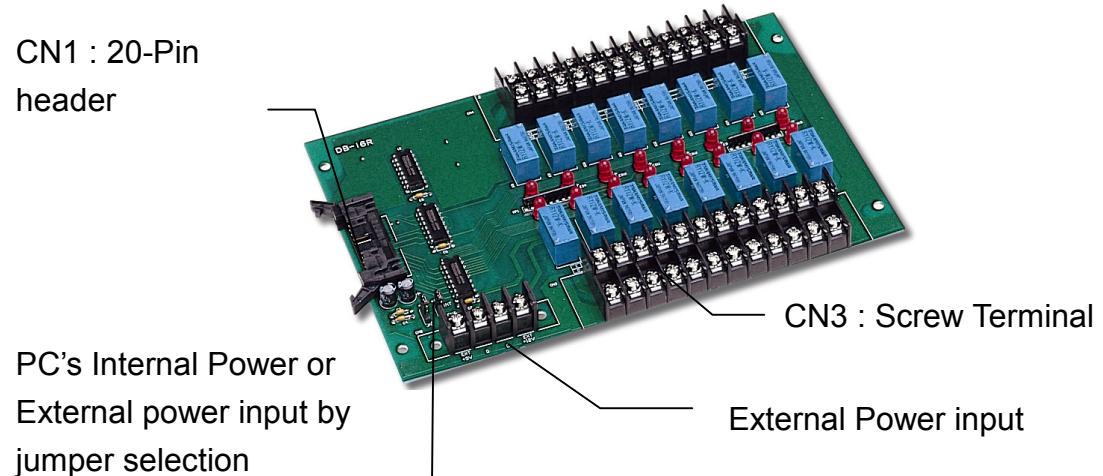

16-channel relay output board

- 16 Form C Relays
- Accept 20-pin connector to control 16 form c relays, for use with A-82X, A-62X, DIO-64, PCI-1800, PCI-1200, PCI-1002 series digital output port or any compatible digital output port.
- LED status indicator
- Screw terminals for field wiring.

2.2. Specifications

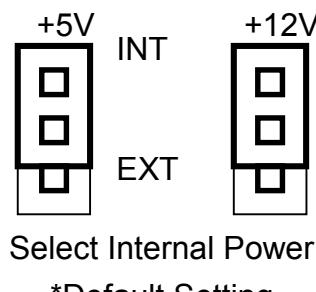

- Type : form c
- Nominal load :0.5 A/120VAC , 1A /24VDC
- Max. Switching Power :60VA,24W
- Max. Switching Voltage :120VAC , 60VDC
- Max. Switching Current :1A
- Life Expectancy :Electrical (20 Millions Times)
- Time Value : Operate6ms
- Release3ms
- Control Logic :Input TTL high (+5V) , relay on
- Power consumption :12 V /0.53A ; 5V /0.2 A
- Dimensions:8 inch (205mm) x 4.5 inch (114mm)
- Operating Temperature :..... 0 - 60°C
- Storage Temperature :0-60°C
- Humidity :5% to 90% Non condensing

2.3. DB-16R's Layout

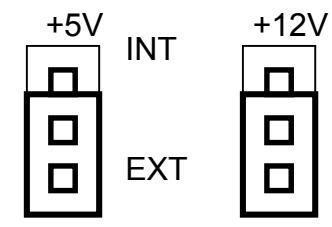

2.4. Jumper Setting

DB-16R PC's internal power or external power input by jumper selection.

Select Internal Power

*Default Setting

Select External Power

Note: INT: Internal Power Source

EXT: External Power Source

Don't install too much DB-16R in one PC if the jumper is set in the internal power.

Some PC's power supply is small and used to power PC only. The power supply will be damaged, if install too much DB-16R and using internal power. You should calculate the power consumption of DB-16R and to make sure which setting is better.

2.5. Pin Assignment

The CN1 is 20-pin header linked to TTL digital I/O board via 20-pin flat cable.
The CN2 is an external power input connector for external power input wiring.
The CN3 and CN4 are relay contact screw terminal blocks.

DB-16R -CN1 : 20 Pin connector

3. DB-24R / DB-24RD

The DB-24R / DB-24RD, 24 channel Relay Output Board, consists of 24 form c relays for efficient switch of load by programmed control. The DB-24R can be connected to DIO-24, DIO-48, DIO-D96, DIO-144, PIO-D144, PIO-D96 and PIO-D48 and any other OPTO-22 compatible Digital I/O board. The relays are energized by apply 5 volt signal to the appropriate relay channel on the 50-pin header or 37-pin D-sub connector (DB-24RD). Twenty-four enunciator LEDs, one for each relay, light when their associated relay is activated. This board provides a screw terminal for external power supply.

3.1. Features

■ DB-24R

- 24 Form C Relays.
- Contact rate up to 0.5A/120Vac , 1A/30Vdc
- Accept 50-pin OPTO-22 compatible header, For DIO-24, DIO-48, DIO-144 and PIO-series digital output port or any OPTO-22 compatible digital output port.
- LED indicate relay status.
- Screw terminals for filed wiring.

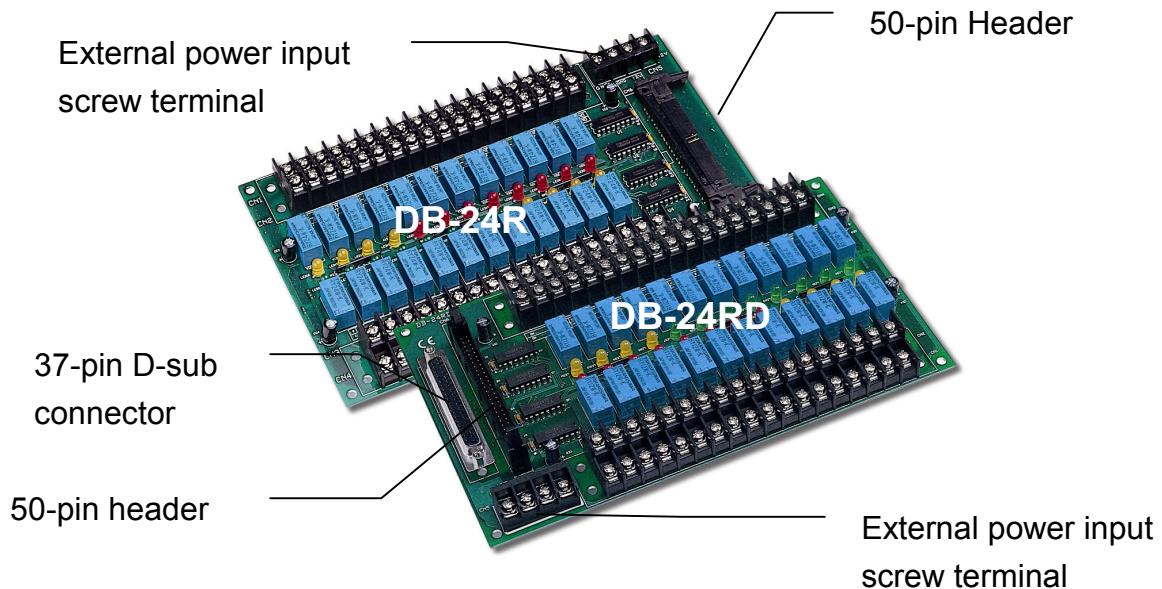

■ DB-24RD

- Accept 50-pin header and 37-pin D-sub connector
 1. Accept 50-pin OPTO-22 compatible header, For DIO-24, DIO-48 , DIO-144 and PIO-series digital output port or any OPTO-22 compatible digital output port.
 2. The 37-pin D-sub connector can be directly connected to PIO-D144, PIO-D96, PIO-D48, PIO-D56 and PIO-D24.
- 24 Form C Relays.
- Contact rate up to 0.5A/120Vac , 1A/30Vdc
- LED's indicate relay status.
- Screw terminals for filed wiring.

3.2. Specification

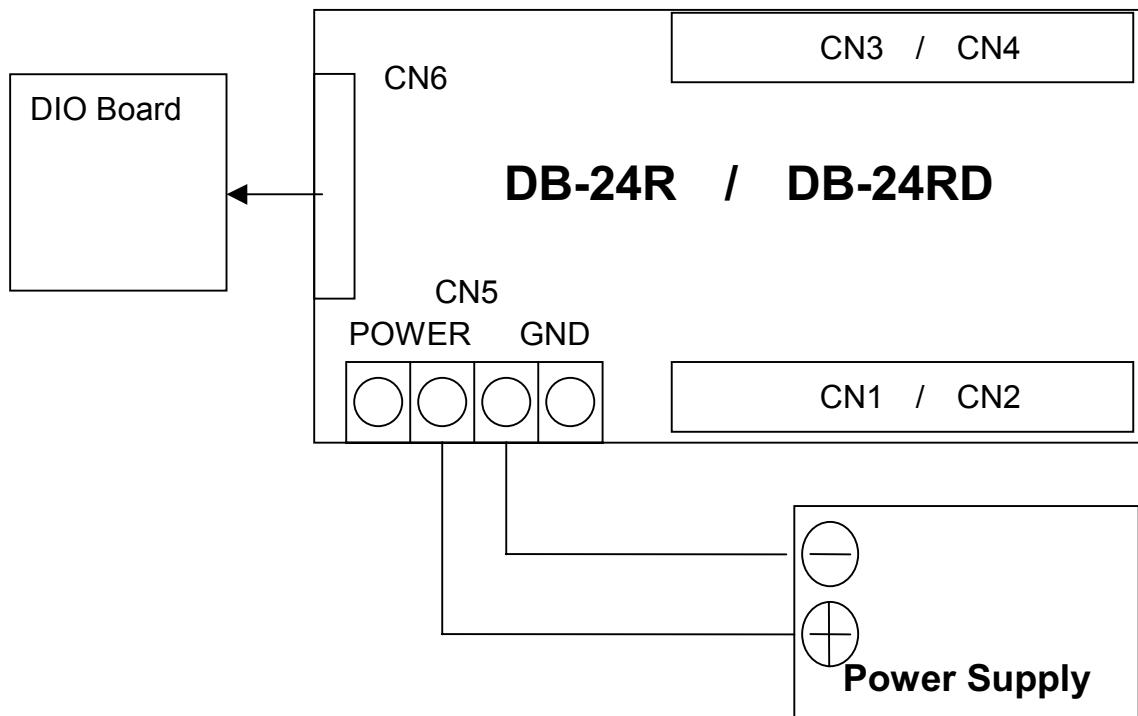

- Type : form c
- Nominal load :0.5 A/120VAC , 1A /24VDC
- Max. Switching Power :60VA,24W
- Max. Switching Voltage :120VAC , 60VDC
- Max. Switching Current :1A
- Life Expectancy :Electrical (20 Millions Times)
- Time Value : Operate6ms
- Release3ms
- Control Logic :Input TTL high (+5V) , relay on
- Power consumption :12 V /0.53A ; 5V /0.2 A
- Dimensions :8 inch (205mm) x 4.5 inch (114mm)
- Operating Temperature : 0 - 60°C
- Storage Temperature :0-60°C
- Humidity :5% to 90% Non condensing

3.3. Layout

DB-24PR and DB-24R support external power supply only.

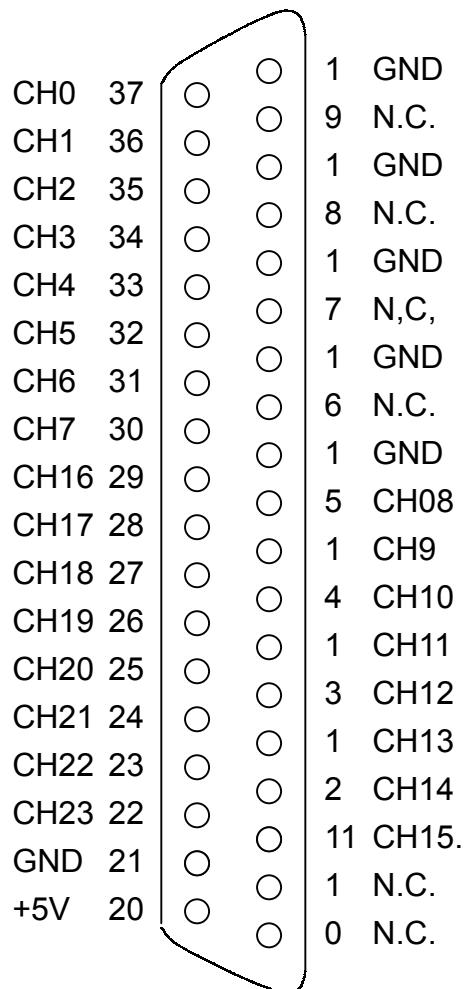

DB-24R/12V, B-24RD/12V for DC 12V external power supply
DB-24R/12V, DB-24RD/24V for DC 24V external power supply

3.4. Pin-Assignments

Form C Relay

4. DB-24PR / DB-24PRD

The DB-24PR / DB-24PRD, 24 channel power relay output board, consists of 8 form C & 16 form A electromechanical relays for efficient switching of load by programmed control. The contact of each relay can control a 5A load at 250VAC/30VDC. The relay are energized by applying 5 voltage signal to the appropriated relay channel on the 20-pin header (DB-24PR only), 50 pin header and 37-pin D-sub connector (DB-24PRD only). Twenty-four enunciator LEDs, one for each relay, light when their associated relay is activated. To avoid overloading your PC's power supply, this board provides a screw terminal for power supply. CN1, CN2, CN3 and CN4 are terminal blocks to connect with wiring. The CN7 is used to connect with DIO-24, DIO-48, DIO-144 or any OPTO-22 compatible digital output port. The CN6 is used to connect with A-82XPG series PCI-1800 series ISO-DA series, DIO-64 or any compatible digital output port. The DB-24PRD has one 37-pin D-sub connector. The 37-pin D-sub connector can be directly connected to PIO-D144, PIO-D96, PIO-D48 and PIO-D24's 37-pin D-sub connector.

4.1. Features

■ DB-24PR

- 16 form A relays, 8 form C relays.
- DB-24PR accept two kind connectors:

CN6 accepts 20-pin header to control 8 form C (channel 0~7) relays and 8 form A relays (channel 8~15).

CN5 accepts 50-pin header to control 8 form C relays and 16 form A relays.

- Each varistor protect one contact.
- LED indicate relay status.

■ DB-24PRD

- DB-24PRD accept two kind connectors:

One 37-pin D-sub connector for PIO-D144, PIO-D96, PIO-D48, PIO-D56 and PIO-D24 digital I/O boards

One 50-pin header for DIO-144, DIO-96, DIO-48 and DIO-24 digital I/O boards. Other features are the same as DB-24PR

4.2. Specifications

- Form A relays

Type : 1 form A (SPST-NO)

Rating :

Nominal Load	5A 250VAC or 30VDC
Max. Switching Power.....	90W
Max Switching Voltage.....	270VAC,150VDC.
Max. Switching Current.....	5A

Life expectancy:

Mechanical.....	20 millions operations
-----------------	------------------------

Time Value:

Operate.....	10ms
Release.....	5ms

- Form C Relays

Type : 1 form C (SPDT)

Rating :

Nominal Load	250VAC / 5A.
MAX. Switching Power.....	1,250VA(NO) , 750VA(NC)
MAX. Switching Voltage.....	250VAC , 150VDC
MAX. Switching Current	5A

Life expectancy:

Mechanical	10 millions operations
------------------	------------------------

Time Value:

Operate.....	10ms
Release.....	5ms

- Varistor:

Power consumption:

Min :	2.5uA (All relays off)
Max :	0.5 A (All relays On)
1 relay On :	22mA

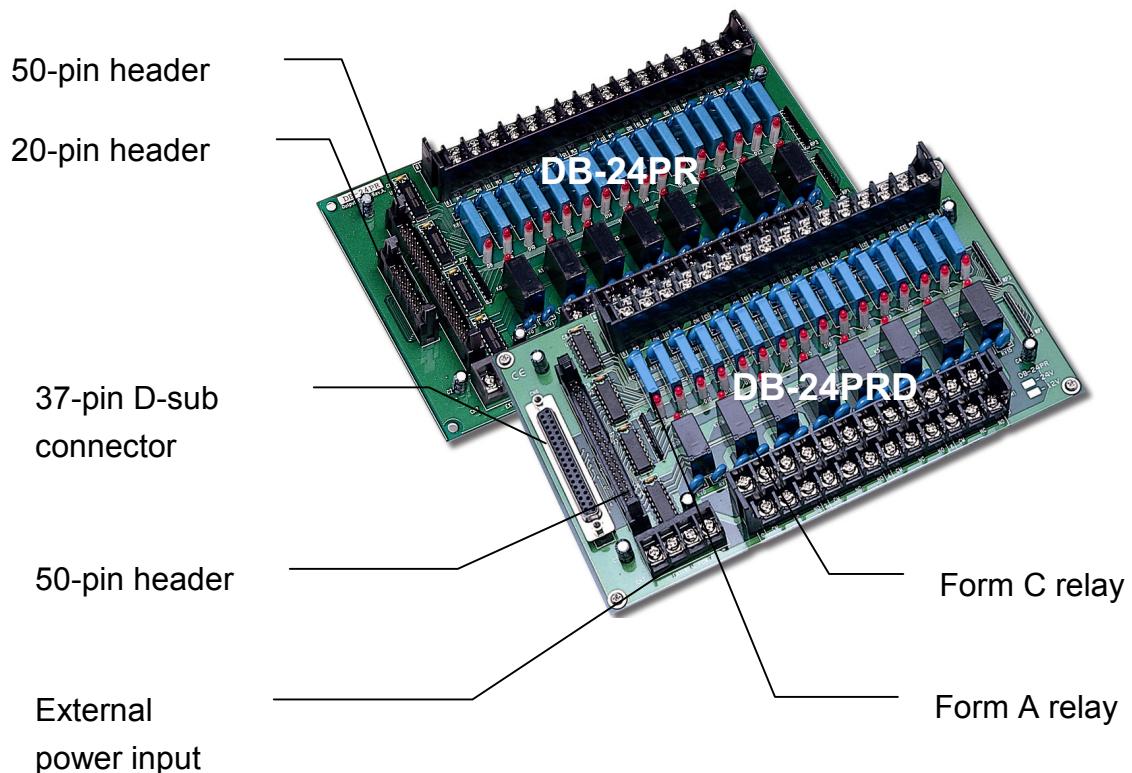

- Dimensions: 1339 (W) mm X 220 (D) mm

4.3. Applications

- Test Automation
- Laboratory & Factory Automation
- On/Off Control

4.4. DB-24PR Power relay board

Layout

Note :

DB-24R , DB-24RD , DB-24PR , DB-24PRD provides external power input only.

The input power has two versions:

External Power +12Vdc input for 12V Version

External Power +24Vdc input for 24V version

5. DB-24C 24-Channel

Open-Collector Output Board

The DB-24C has 24 channels of optically isolated digital outputs, arranged into four isolated banks. Each digital output offers a darlington transistor and integral suppression diode for inductive load. The board interface to field logic signals, eliminating ground-loop problems and isolating the host computer from damaging voltages. The DB-24C has one 37-pin D-sub connector, One 50-pin OPTO-22 compatible male header and one 20-pin male header. The transistor is energized by applying a 5-voltage signal to the appropriate input channels on the 50-pin header or 20-pin header or 37-pin D-sub connector. Twenty-four enunciator LEDs, one for each transistor, light when their associated transistor is activated. Because there is a 37-pin D-sub connector on the board, the user may use it to interface to any TTL output board. In other words, the user may use it as a general purpose open-collector output board

5.1. Features

- Group A (low nibble) and Group B(high nibble) has 4-channel high current open-collector output each. The maximum load is 600mA per channels
- Group A(high nibble), Group B (low nibble), C(byte) and Group D has 8-channel open-collector output each. The maximum load is 100mA per channels.
- Accept 20-pin connector to control 8 high current output channel and 8 low current output channels.
- LEDs indicate each channel and power status.
- 3,750V optical isolation
- 5Vdc logic levels

5.2. Applications

- Leds indicate the status of transistor
- Screw terminals for easy field wiring
- OPTO-22 Compatible connector.
- D-sub connector 37-pin connector connects directly to PIO-D144, PIO-D96 and PIO-D24 board or another OPTO-22 board with ADP-37 adapter

5.3. Specification

The maximum loading current of each high current output channel: 600mA

The maximum loading current of each low current output channel: 100mA

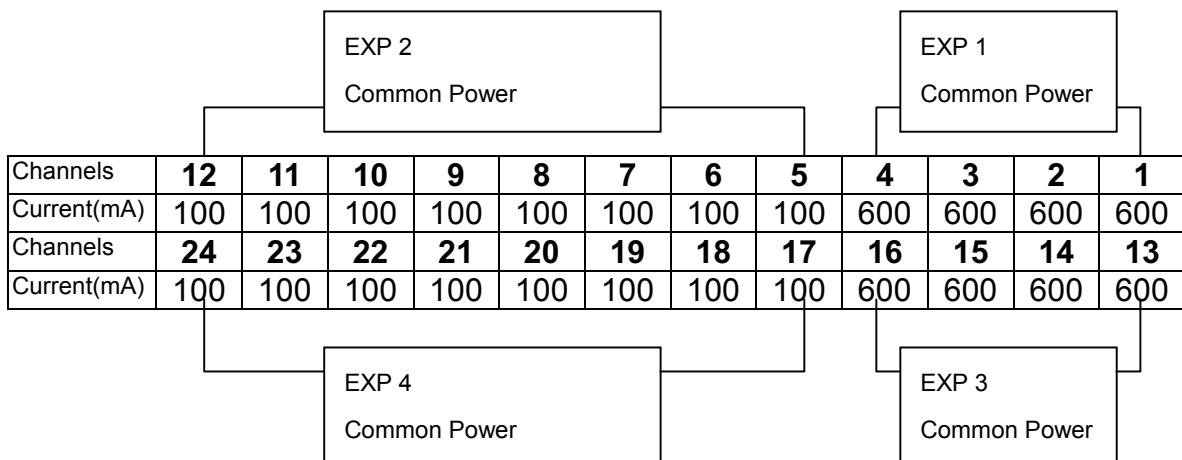

Power consumption: DC+5V @ 0.4Amax.

6. DB-24POR

24-Channel Photo Output

Board

The DB-24POR includes 24 normally open, form A, Photo-MOS relays. The board interface to field logic signals, eliminating ground-loop problems and isolating the host computer from damaging voltages. The user can use the DB-24POR to switch load, up to 350VAC and up to 130mA, The relay is energized by applying a 5 voltage signal to the appropriate relay channel on the 50-pin OPTO-22 compatible connector or 37-pin D-sub connector. Twenty-four indicators LEDs, one for each relay, light when their associated relay is activated. Because there is a D-sub 37-pin connector on the board, the user may use it to interface to any TTL output board. In other words, the user may use it as a general-purpose photo-MOS relay output board.

6.1. Features

- 24 Optically isolated digital output channels
- 24 form A photo-MOS relays
- Switch up to max. 0.13A at max. 350VAC
- 5VDC logic levels
- 5,000V optically isolation
- LED's indicated relay status
- Built-in fuses and diodes to protect from wrong connection of external power supply.
- 50-pin header connector directly to DIO-24, DIO-48,DIO144 and PIO-D144, PIO-D96, PIO-D56, PIO-D48, PIO-D24 and other OPTO-22 compatible digital output boards.
- D-sub 37-pin connector connects directly to PIO-D144, PIO-D96, PIO-D56, PIO-D48 and PIO-D24 digital output boards.

6.2. Applications

- ON/OFF Control
- Energy management
- IC factory Automation
- Test Automation

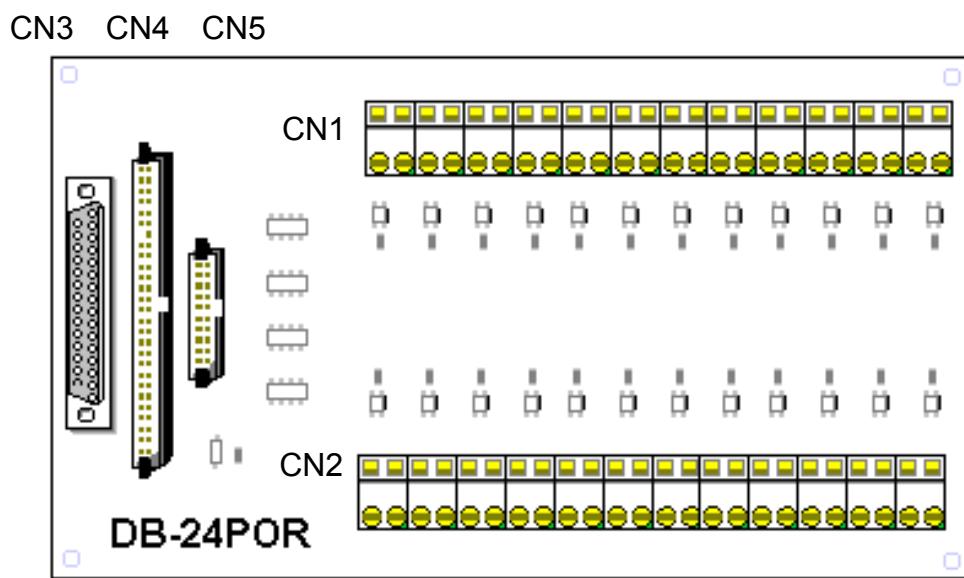

6.3. Specification

■ Photo-MOS Relay

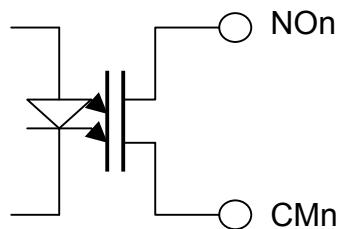

Item	Spec.	Note
Turn On Time	0.7mS	Typical
Turn Off time	0.05mS	Typical
Output On resistance	23Ω	Typical
Load Voltage	350VAC	Peak AC
Continuous load current	130mA	Peak AC
Power dissipation	500mW	
Input / Output Isolation	5,000V	

- Dimensions: 130mm X 220mm
- Operating Temperature : 0~60°C
- Storage Temperature: -20°C~70°C
- Humidity : 5% to 90%, non-condensing

7. DB-24SSR 24-Channel Solid State Relay Board

The DB-24SSR includes 24 normally open, or form A, solid-state relays. The board interface to field logic signals, eliminating ground-loop problems and isolating the host computer from damaging voltages. The user can use the DB-24SSR to switch high voltage load, up to 240VAC and up to 4A. The relay is energized by applying a 5-voltage signal to the appropriate relay channel on the 50-pin header or 37-pin D-sub connector. Twenty-four enunciator LEDs, one for each relay, light when their associated relay is activated. Because there is a D-sub 37-pin connector on the board, the user may use it to interface to any TTL output board. In other words, the user may use it as a general purpose solid state relay output board.

7.1. Features

- 24 optically isolated digital output channels
- 24 form A solid-state relays
- Switch up to 4A at 250VAC
- 5VDC logic levels
- 2,500VAC optical isolation
- Built-in varistor.
- Screw terminal for easy field wiring
- Can choose plug-in screw-terminal, modification and ensuring simple installation, modification and maintenance
- 50-pin header connects directly to DIO-24,DIO-48,DIO144,PIO-D144, PIO-D96, PIO-D48, and PIO-D24 OPTO-22 compatible board
- D-Sub 37-pin connector connects directly to PIO-D144, PIO-D96, PIO-D48 and PIO-D24 board or another OPTO-22 board with ADP-37 adapter

7.2. Applications

- ON/OFF control
- Energy management
- Test Automation
- Process Control

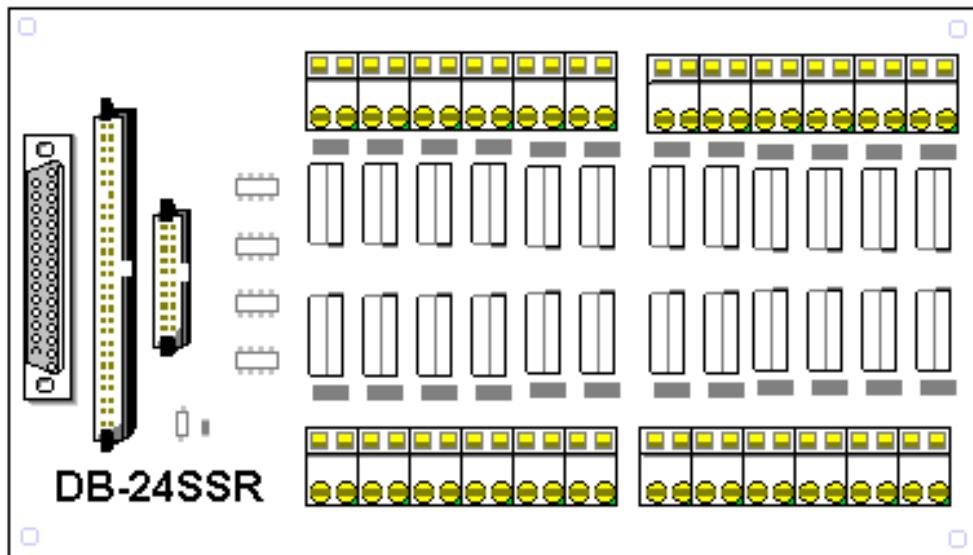

7.3. Specification

■ Solid State Relay (AC)

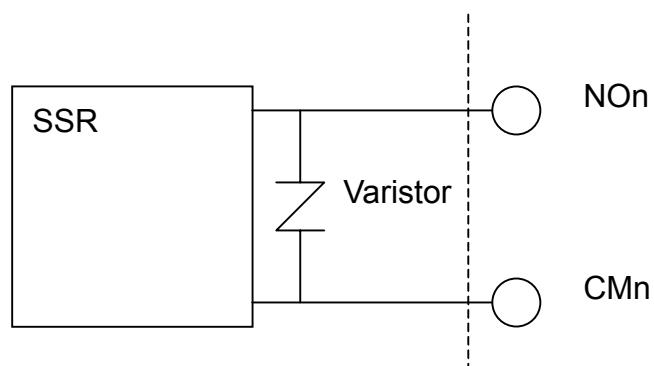

Load Voltage	50~250VAC
Maxi. Load Current	4A
Repetitive Peak OFF Voltage	600V
Max. "ON-state" Voltage Drop	1.5V
Surge Current	50A
Maxi. "OFF-State" Leakage Current	5mA
Mini. Load Current	20mA
Breakdown Voltage	2,500V (Between Input & Output)
Insulation resistance. i.	100,000,000Ω(min.)
Operate time , 1/2 cycle of voltage sine wave	1mS (max.)
Zero Crossing	Yes
Snubber Circuit	Yes

- Power Consumption: [+5V@0.4A\(max.\)](#)
- Dimension: 130mm X 220mm
- Operation Temperature : 0~60°C

8. _DB-16P 16 Opto-Isolated

Digital Input Terminal Board

The DB-16P is a 16 channel isolated digital input daughter board for A-82x DAS board or any 812PG, 711 series DAS boards. The optically isolated inputs of the DB-16P consist of a bi-directional LED with a resistor for current sensing. You can use the DB-16P to sense DC signal from TTL levels up to 24V. You can also use DB-16P to sense a wide range of AC signals. The DB-16P registers a constant logic high if the frequency of the input AC signal is greater or equal to 1 kHz, and the voltage of the AC signal is at least 4Vrms. If you are using AC input signal, you should short the AC filter Jumper. You can use the board to isolate the computer from large common-mode voltages, ground loops, and voltage spikes that often occur in industrial environments.

8.1. Features

- DB-16P 16 optically isolated digital input
- DB-16P connected to DIO-64 , A-62X , A-82x data acquisition boards
- AC/DC Signal Input
- AC Signal Input with filter
- Input buffer with voltage comparators
- 3,000V isolation
- Each channel has it's LED indicator

8.2. Specifications

- I/O connector Electrical Specifications
Configuration: optically isolated digital input channels
Compatibility: TTL compatible
- Digital Input
Number of channels: 16 Channels ,
each channel with its own ground
reference isolated from other channels

Maximum input voltage: 24 VDC or 24 VAC

Digital Logic Level:

Level	Minimum	Maximum
Input low voltage (DC or peak AC)	0	+/-1V
Input high voltage DC 1kHz AC	+/- 3.8VDC 4Vrms	+/-24VDC 24VAC

Input impedance: 1.2k

Input Current

5V inputs : 4 mA /channel

24V inputs : 20 mA /channel

Input Response Time :20µs without filter / 2.2ms with filter

- Power consumption 220mA/ +5V (Max) from PC
- Board Dimension : 8.06 " (205mm) X 4.5 "(114mm)
- Operating Environment
- Component temperature : 0 to 50°C
- Relativity humidity : 5% to 90% non condensing
- Storage Environment

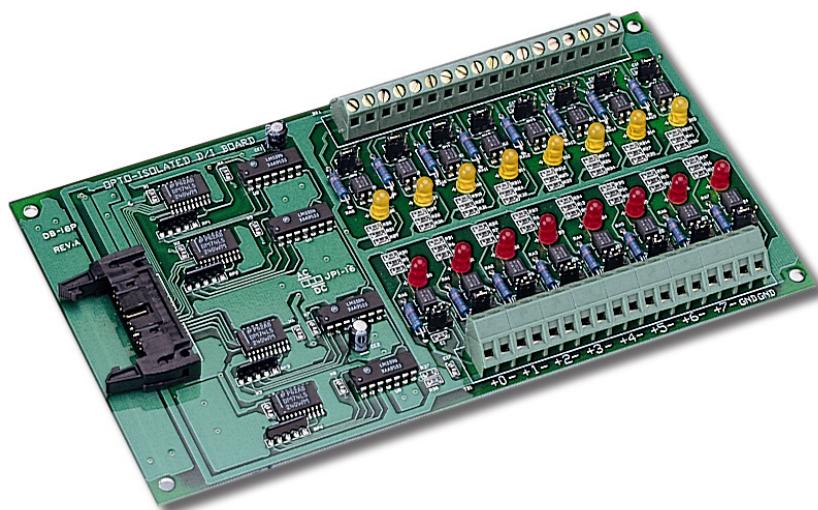

Temperature: 0-60°C

Relative humidity: 5% to 90 % non condensin

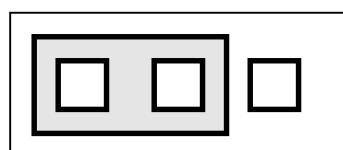

8.3. Applications

- Isolated digital input sensing
- Process monitoring

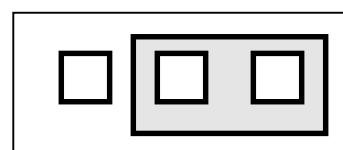

8.4. Layout

8.5. Jumper setting

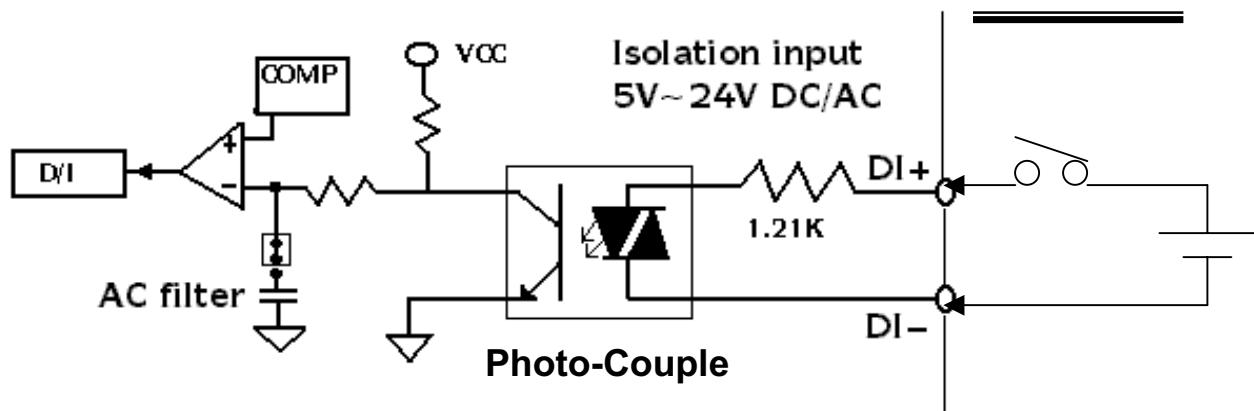

With filter for AC signal

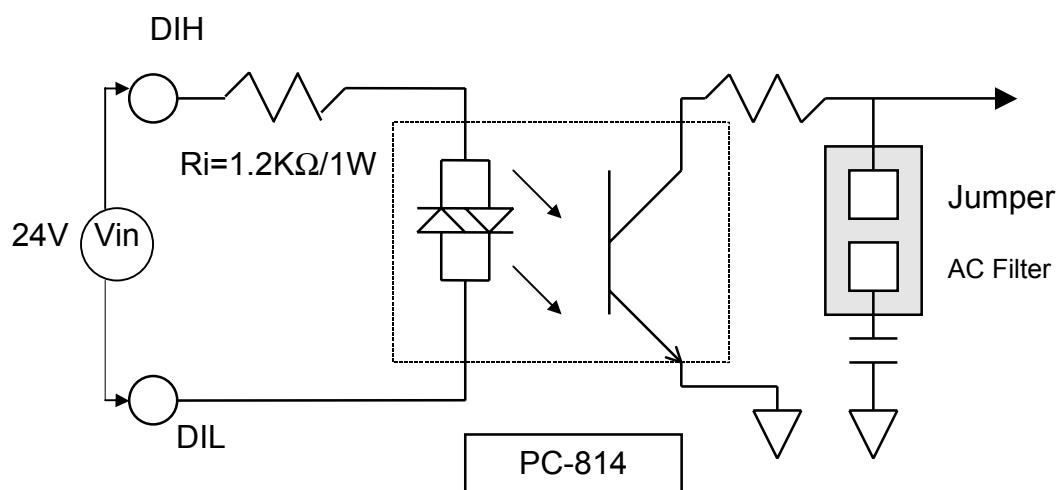

Without filter for DC signal

If you are using AC signal, You must short the AC FILTER jumper.
If you are using DC input signals, the AC FILTER is optional. If the response time of input signals less than 20 μ s, set the filter off. If you want a slow response (about 5 to 10 ms) for rejecting noise or contact bouncing, short the AC FILTER jumper.

8.6. Isolated Input

The normal input voltage range is 5 to 24 V AC or DC . The normal input range can be changed by choosing suitable resistor to limit the current through the Photo-isolator to about 10 mA(I_f). The default resistor is $1.2\text{K}\Omega/1\text{W}$.

$$R_i = V_{in}/I_f$$

$$P_w = V_{in} \times I_f$$

Calculation Example:

If $V_{in} = 120\text{V}$ then $R_i = 120(\text{V}) / 0.01(\text{A}) = 12\text{K}\Omega$

$$P_w = 120(\text{V}) \times 0.01(\text{A}) = 1.2\text{W}$$

The R_i must be replaced by $12\text{K}\Omega/2\text{W}(1.2\text{W})$

9. DB-24P 24 Photo-Isolated

Digital Input Terminal Board

The general specification of DB-24P is the same as DB-16P. But DB-24P has one Opto-22 compatible 50-pin connector and can be used for 24 channel photo-isolated digital input .

The DB-24PD is almost the same as DB-24P. But DB-24PD has one 37-pin D-sub connector.

9.1. Features

- 24 optically isolated digital input
 - connected to DIO-24 , DIO-48 , DIO-144 or any OPTO-22 compatible connector of digital input / output board.
 - DB-24PD connect to PIO-D144 , PIO-D96 , PIO-D48 and PIO-D24
 - AC/DC Signal Input
 - AC Signal Input with filter
 - Input buffer with voltage comparators
 - 1,000V isolation
 - Each channel has it's LED indicator
-

9.2. Applications

- Isolated digital input sensing
- Process monitoring

9.3. Specification

- I/O connector Electrical Specifications
 - Configuration: optically isolated digital input channels
 - Compatibility: TTL compatible
- Digital Input
 - Number of channels: 24 Channels
 - each channel with its own ground reference isolated from other channels
 - Maximum input voltage: 24 VDC or 24 VAC

Digital Logic Level:

Level	Minimum	Maximum
Input low voltage (DC or peak AC)	0	+/-1V
Input high voltage DC 1kHz AC	+/- 3.8VDC 4Vrms	+/-24VDC 24VAC

Input impedance: 1.2k

Input Current

5V inputs : 4 mA /channel

24V inputs : 20 mA /channel

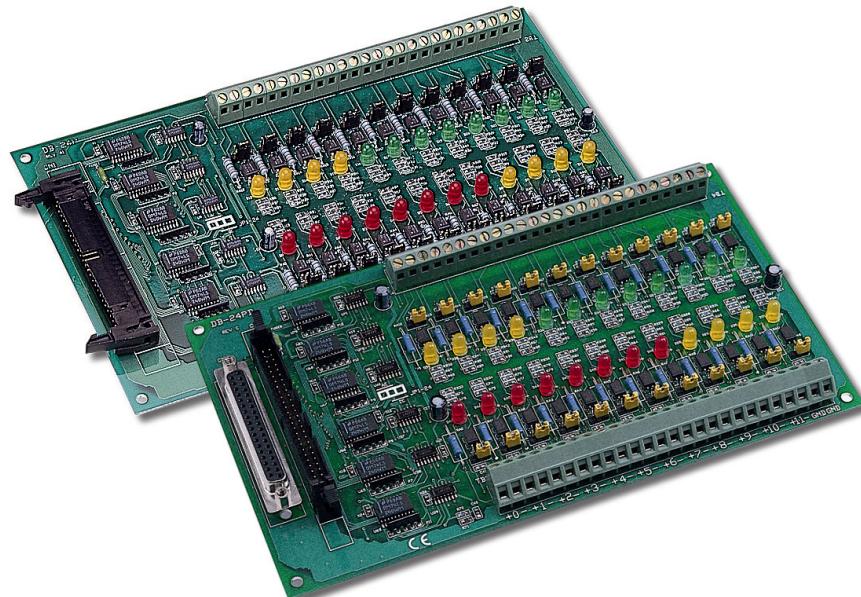

Input Response Time :20µs without filter / 2.2ms with filter

- Power consumption: DB-24P 290mA/ +5V (Max) from PC
- Board Dimensions : 9.7 " (220mm) X 5.7" (130mm)
- Operating Environment
 - Component temperature : 0 to 50°C
 - Relativity humidity : 5% to 90% non condensing
- Storage Environment
 - Temperature: 0-60°C
 - Relative humidity: 5% to 90 % non condensing

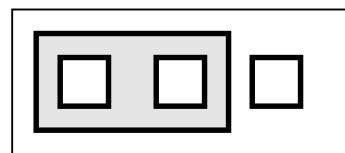

4.

9.4. Layout

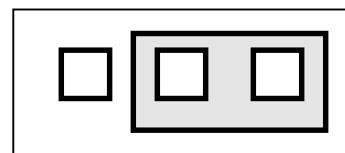

DB-24P / DB-24PD

9.5. Jumper setting

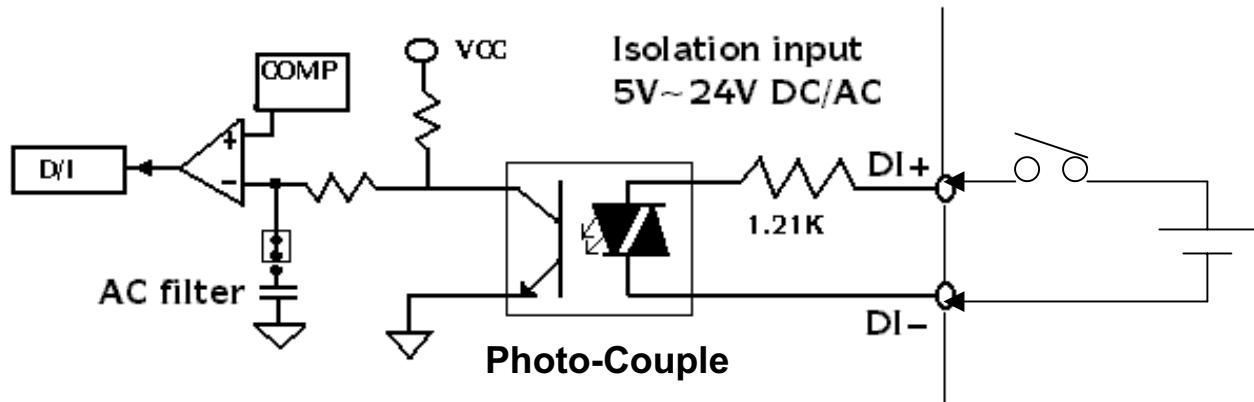

With filter for AC signal

Without filter for DC signal

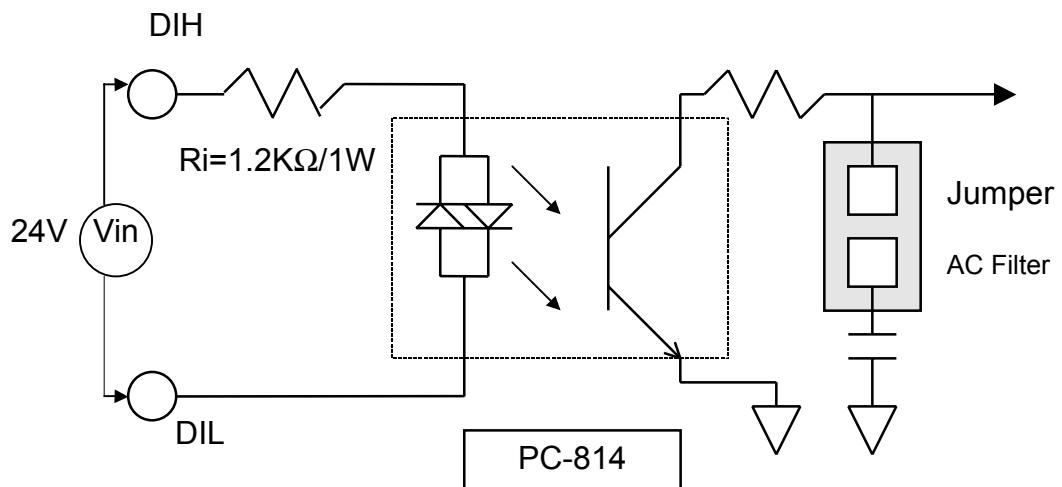

If you are using AC signal, You must short the AC FILTER jumper.

If you are using DC input signals, the AC FILTER is optional. If the response time of input signals less than 20 μ s, set the filter off. If you want a slow response (about 5 to 10 ms) for rejecting noise or contact bouncing, short the AC FILTER jumper.

9.6. Isolated Input

The normal input voltage range is 5 to 24 V AC or DC . The normal input range can be changed by choosing suitable resistor to limit the current through the Photo-isolator to about 10 mA(I_f). The default resistor is $1.2K\Omega/1 W$.

$$R_i = V_{in}/I_f$$

$$P_w = V_{in} \times I_f$$

Calculation Example:

If $V_{in} = 120V$ then $R_i = 120(V) / 0.01(A) = 12K\Omega$

$$P_w = 120(V) \times 0.01(A) = 1.2W$$

The R_i must be replaced by $12K\Omega/2W(1.2W)$
